The Next Generation in Specialty Formulators

Anti-Eff

Speciality Efflorescence Remover

ANTI EFF is a specialty acid formulation designed to safely remove efflorescence from most forms of pavers and masonry blocks. **ANTI EFF** may also be used to remove grout haze and mortar residue. If in doubt always consult your local distributor or Environex Stonecare Specialist to avoid permanent damage to your masonry. Do not use on Bluestone, Travertine, Marble, Limestone or Limestone composite products. Refer to instructions before use.

Follow the 5 Easy Steps

Always wear Personal Protective Equipment (PPE) – A minimum requirement of Safety Glasses, Gloves & Boots. Damage to clothing may occur.

1. Lightly wet the area with fresh water.
2. Mix **ANTI EFF** at 40-65ml per 1L of Water in a plastic watering can and apply to 3-5m² at a time. As the masonry mildly fizzes, agitate gently with an **ENVIRONEX EAGER BEAVER**. Let the area lightly fizz for 2-3 minutes only. (Do not use a higher concentration or longer active time as it will cause damage).
3. Rinse the area with fresh water.
4. Neutralise the area with a capful of **REFRESH** pH neutral detergent in 5-10L of water.
5. Rinse with fresh water.

Always test first.
